

ETTIK ENGINEERING
EMI EMC

LOAD BOX

The test equipment component is designed to simulate electrical loads with precision. Tailored to meet a spectrum of testing needs, our Load Boxes offer versatility, ensuring seamless integration into diverse testing scenarios. They are used for the process of simulating Input signal and load conditioning for the DUT. Portable resistive, capacitive and Inductive load banks are used for simulating actuators.

- EMI/EMC Testing applications
- Precision Load Simulation (R, RL)
- Optical Isolation
- Original loads integration
- Overload Protection
- Durable Construction for Longevity

ETTIK ENGINEERING PRIVATE LIMITED
NO:6/1116-1/3, PARAMATHI ROAD, C E B COLONY,
NAMAKKAL, TAMIL NADU 637001.
